

Flossbach von Storch - Global Convertible Bond - I

INVESTMENT STRATEGY

The Flossbach von Storch - Global Convertible Bond represents a defensive alternative to pure equity investments. The convex profile of convertible bonds enables investors to profit from rising prices on the equity market while at the same time limiting price risks. Security selection is based on a fundamental analysis process using in-house valuation models. If no convertible bond is available for an underlying security that appears attractive, or if its structure does not match the desired profile, the fund management can combine bond and call option to present a similarly attractive structure. Other in-house valuation models include ESG questions, engagement, and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. Foreign currency risks are currently largely hedged. The fund invests globally in convertible bonds. The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the UBS Thomson Reuters Global Focus Hedged Convertible Bond Index as a benchmark. The investment manager is not linked to the Index at any time when making investment decision and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the reported benchmark. The Sub-Fund is categorized as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred. **Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund.** Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

MONTHLY COMMENTARY

The upward trend that began in mid-April, following the sell-off around Liberation Day, continued on the global equity markets in May. The main reason for this development was the progress announced in the tariff negotiations between the USA and the rest of the world. The announcement of a 90-day reciprocal tariff reduction between the USA and China was received particularly positively. US tariffs on Chinese imports were reduced from up to 145% to 30%, while China in turn reduced its tariffs on US goods from 125% to 10%. Towards the end of the month, Trump's US tariff threats of up to 50% on EU exports from June put the markets under further short-term pressure before the US president postponed the introduction once again. Over the course of the month, global equity markets achieved mid to high single-digit percentage gains, with technology stocks outperforming (MSCI World: +6.0%; Nasdaq 100: +9.1%; S&P 500: +6.3%; Russell 2000: +5.3% (all in US dollars); STOXX Europe 600 (in euros): +5.1%; Nikkei 225 (in Japanese yen): +5.3%; Hang Seng (in Hong Kong dollars): +5.9% (all returns calculated including dividends)). Almost all major equity indices are now trading well above their pre-'Liberation Day' levels again. The reporting period also focussed on the USA's escalating national debt. The tax reform initiated by Donald Trump, which among other things extends the tax breaks of his first term in office, has been passed by the House of Representatives. If the Senate also votes in favour, it is likely to represent a (further) burden on the US budget. In view of the expected larger budget deficits, the USA lost its last top credit rating – the rating agency Moody's lowered its credit rating from AAA to Aa1. As a result, US Treasuries came under pressure and the transatlantic interest-rate differential widened. Yields on US Treasuries rose by 25 to 30 basis points (bps), while their German counterparts only increased by 5 to 10 bps. Despite this widening, the US dollar was unable to benefit – the euro-dollar exchange rate was virtually unchanged compared to the previous month. Convertible bonds performed positively overall in May, driven by the equity markets. On a monthly basis, the Fund recorded a positive performance of 1.1 %. We reduced the delta at fund level (including cash, equity derivatives and bonds) from 35.8% in the middle of the month to 33.7% at the end of May against the backdrop of the strong recovery in equities. The delta of the convertible bonds in the Fund was 35 %.

Flossbach von Storch - Global Convertible Bond - I

OPPORTUNITIES

- + Investing in funds can deliver an attractive result at a lower level of risk compared to a direct investment in equities.
- + Income can be generated from regular interest payments.
- + Convertible bonds can increase in value when equity markets rise.
- + Derivatives can be used to increase potential yields.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.

RISKS

- Investing in convertible bonds may entail price risks, especially in the case of rising interest rates on the capital markets.
- Convertible bonds can decline in value when equity markets fall.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).
- The straight concentration on special markets can have a negative impact because of the dependent performance of these selected markets.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.
