Flossbach von Storch

Flossbach von Storch - Multiple Opportunities II - RT

CATEGORY: MULTI ASSET
Data as per 30 April 2025

INVESTMENT STRATEGY

The Fund pursues an **active investment approach**. The Fund Manager can invest flexibly in the asset classes that appear attractive from his/her point of view in the respective capital market environment; the equity component is at least 25 per cent.

The basis for asset allocation is the Fund's own **independent investment world view**. The Fund deliberately does not follow any benchmark index. The primary objective is to generate sustainably attractive returns. Whether an individual investment is attractive is assessed within the framework of a thorough company analysis.

The **risk-reward ratio** is decisive for every investment decision; the potential return must clearly overcompensate for any risk of loss. The portfolio structure is based on the five guidelines of the Flossbach von Storch Pentagram diversification, quality, flexibility, solvency, and value. The composition of the portfolio is made by the Fund Manager exclusively in accordance with the criteria defined in the investment policy and is regularly reviewed and adjusted if necessary.

The investment strategy includes in-house valuation models, ESG integration, engagement, and the exercise of voting rights. In addition, exclusion criteria defined within the Sub-Fund's investment policy are taken into account. The Sub-Fund is categorized as an Article 8 product within the definition of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the current Sales Prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

FUND DETAILS

Securities ID No. (WKN)	A1XEQ4
ISIN	LU1038809395
Valor number	23835192

MONTHLY COMMENTARY

On 2 April, Donald Trump shocked the USA's trading partners with extensive tariff restrictions. Against a backdrop of significant stock market losses, rapidly rising yields on US Treasuries and a depreciation of the US dollar, Trump backtracked during the month and announced numerous suspensions of 'reciprocal' tariffs on goods from abroad. The announcements had the desired effect. Over the course of the month, the equity and bond markets recouped some of their interim losses. The MSCI World equity index, for example, turned a temporary loss of 11% (calculated in euros) into a loss of just under 4% by the end of April. Yields on 10-year US Treasuries were back at 4.16% at the end of the month, after temporarily rising 40 basis points in the middle of the month. Investors in the eurozone were weighed down by developments on the currency market, with the US dollar depreciating by 4.7% against the euro in April. Gold rose by 5.3% in US dollar terms, with a corresponding gain of 0.6% in euro terms. Even though we are still a long way from a debt crisis, this precious metal is also benefiting from declining confidence in US Treasuries and the US dollar as the world's reserve currency.

The start of the first-quarter reporting season was marked by uncertainty. Executive boards of international companies reported widespread caution on the part of customers, which could have a significant impact on the global economy starting in the second quarter if Trump pushes through his tariff policy. Even though the capital market appears to be serving as a corrective for Trump, we believe it is appropriate to be more cautious in this environment, especially given the high market valuations. We therefore expanded our hedge against the equity market when prices recovered at the end of April and currently hold 59% of the fund's assets in equities, which is less than the average for previous years. As the unpredictability of the US administration could also pose risks for the global reserve currency, we reduced our hedge against the US dollar in April. The net dollar exposure in the portfolio is now only 37%.

In April, shares in cosmetics manufacturer L'Oréal, industrial conglomerate Amphenol from the USA and German IT service provider Bechtle made the highest positive contributions to the portfolio. Shares in consumer goods manufacturers Reckitt Benckiser, Pepsi and Nike performed poorly following weak quarterly figures. The Fund price outperformed the global equity market in April, falling by -2.4 %, and recorded lower volatility over the course of the month.

FUND MANAGEMENT

"Active, benchmark-independent portfolio management always starts with a blank sheet of paper."

Flossbach von Storch

Flossbach von Storch - Multiple Opportunities II - RT

OPPORTUNITIES

+ Flexible investment policy without benchmarking.
+ Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
+ Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
+ Derivatives can be used to increase potential yields.
+ Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. The ESG criteria restrict the selection of target investments in terms of category and number, sometimes considerably. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the key information document (PRIIP-KID) and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK INDICATOR

Lower risk ← → Higher risk

1	2	3	4	5	6	7

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you.
