

# Flossbach von Storch - Bond Opportunities - RT

## INVESTMENT STRATEGY

Flossbach von Storch - Bond Opportunities is a globally diversified bond fund with an active investment approach that focuses on corporate bonds, government bonds and covered bonds. The Fund flexibly exploits the opportunities of the entire bond market. In addition to bonds with an investment-grade quality, the fund management can also invest in bonds without a rating or in those that do not have investment-grade quality. Foreign currency risks are currently only entered into to a manageable extent. Securities selection is based on a fundamental research and analysis process. The fund manager relies on research tools developed in-house. The investment strategy includes in-house valuation models, ESG integration, engagement and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is categorized as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

## EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, €50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

## MONTHLY COMMENTARY

Following the positive performance of global bond markets in April, eurozone bonds consolidated in May (with yields rising slightly). Euro bonds benefited from growth concerns in the eurozone and slower wage growth. US bonds came under greater pressure, with the rise in US government bond yields causing a significant widening of the transatlantic interest-rate differential. Once again, the main drivers were not the central banks, but the US government's trade policy. Initially, a 90-day tariff reduction between the US and China improved risk sentiment and put upward pressure on US government bond yields. Donald Trump's tax reform, which represents a further burden on the US budget, and the downgrade from Aaa (the last top credit rating for the USA) to Aa1 with a stable outlook by the rating agency Moody's led to further price setbacks. The yield on five-year US Treasuries was around 31 basis points (bps) higher than at the end of March, while the rise in five-year German government bonds was more moderate at 9 bps. Political uncertainty is likely to remain high: the latest US threats to impose tariffs of up to 50 per cent on EU exports to the USA were followed shortly afterwards by their temporary withdrawal. US courts have since blocked the imposition of tariffs on the basis of emergency legislation. Building positions in corporate bonds in the wake of 'Liberation Day' at the start of April continued to pay off in May, while yield spreads recovered further and mitigated the temporary rise in interest rates. We used the latter to extend duration via interest-rate derivatives, international government bonds and inflation-linked bonds. We also sold euro-denominated corporate bonds with very long maturities in exchange for securities with shorter maturities. Some additional hedges were added at the long end to prepare for a steepening of the European yield curve. Overall, we maintained the slight increase in duration with a somewhat less aggressive stance in the credit segment.

# Flossbach von Storch - Bond Opportunities - RT

OPPORTUNITIES

- + Participate in global bond market growth.
- + Income can be generated from regular interest payments.
- + Active interest rate, currency and risk management (e.g. from the use of derivatives).

RISKS

- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium-term: 3 to 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.
